MULLER VISITS UM BIOLOGICAL STATION

MISSOULA---

Dr. C. H. Muller, botany professor at the University of California, Santa Barbara, is spending two weeks at the University of Montana Biological Station at Yellow Bay on Flathead Lake north of Missoula.

While on Flathead Lake Dr. Muller is investigating the antibiotics that are produced by fish and frog eggs.

He has become well known throughout the world for his research studies on the production of chemicals by sagebrush, which inhibit the growth of annual grasses in the vicinity of the plants.

Dr. Muller also is presenting seminars to the students and faculty at Yellow Bay.

Dr. Muller's son, Robert, has studied at the biological station for two years, including this summer. Dr. Muller's wife, Kathryn, is the director of the Santa Barbara Botanical Garden and she is accompanying Dr. Muller on his visit.
